Completed	Wednesday, 21 October 2026, 10:37 PM
Duration	6 mins 33 secs
Grade	**14.00** out of 15.00 (**93.33**%)

Question **1**

Correct

Mark 1.00 out of 1.00

Which of the following is a limitation of binary search?

a. It does not work with negative numbers
b. It can only be applied to large lists
c. It requires the list to be sorted ✓
d. It is slower than linear search for small lists

Question **2**

Correct

Mark 1.00 out of 1.00

What is the time complexity of binary search in the worst case?

a. O(n log n)
b. O🦴
c. O(1)
d. O(log n) ✓

Question **3**

Correct

Mark 1.00 out of 1.00

In _____ checks the elements of a list, one at a time, without skipping any element.

a. Linear search ✓
b. Hash search
c. Both (1) & (3)
d. Binary search

Question **4**

Correct

Mark 1.00 out of 1.00

In linear search, if the target element is not found in the list, what is the result?

a. The first element is returned
b. The search is considered unsuccessful ✓
c. An error is raised
d. The last element is returned

Question **5**

Correct

Mark 1.00 out of 1.00

The average case occurs in the linear search algorithm

a. When the item is not the array at all
b. When the item is the last element in the array
c. When the item is somewhere in the middle of the array ✓
d. Item is the last element in the array or item is not there at all

Question **6**

Correct

Mark 1.00 out of 1.00

Which of the following scenarios is best suited for applying binary search?

a. When the list is sorted ✓
b. When the list is unsorted
c. When the list is very small
d. When the list contains duplicate elements

Question **7**

Correct

Mark 1.00 out of 1.00

In binary search, what happens if the middle element does not match the target element?

a. The search continues from the beginning
b. The search stops
c. The list is sorted
d. The search continues in the left or right sublist ✓

Question **8**

Correct

Mark 1.00 out of 1.00

In linear search, how is the element searched?

a. By sorting the list first
b. By dividing the list into halves
c. By using a hash function
d. By comparing each element in the list sequentially ✓

Question **9**

Correct

Mark 1.00 out of 1.00

What is the key characteristic of binary search?

a. It compares elements sequentially
b. It can be applied only if the list is sorted ✓
c. It works on unsorted lists
d. It always starts from the beginning of the list

Question **10**

Correct

Mark 1.00 out of 1.00

Finding the location of a given item in a collection of items is called

a. Mining
b. Finding
c. Discovering
d. Searching ✓

Question **11**

Correct

Mark 1.00 out of 1.00

Which method of searching involves sequentially comparing each element until a match is found?

a. Hashing
b. Jump search
c. Linear search ✓
d. Binary search

Question **12**

Correct

Mark 1.00 out of 1.00

Which of the following best describes the process of a linear search?

a. Sorting the list before searching
b. Skipping every second element
c. Checking each element sequentially ✓
d. Dividing the list in half repeatedly

Question **13**

Incorrect

Mark 0.00 out of 1.00

Given an array arr = {45,77,89,90,94,99,100} and key = 100; What are the mid values(corresponding array elements) generated in the first and second iterations?

a. 89 and 94
b. 90 and 100 ✗
c. 94 and 99
d. 90 and 99

Question **14**

Correct

Mark 1.00 out of 1.00

Which of the following is a type of searching method?

a. Bubble search
b. Quick search
c. Linear search ✓
d. Merge search

Question **15**

Correct

Mark 1.00 out of 1.00

In binary search, how is the middle element determined?

a. By using a hash function
b. By comparing each element sequentially
c. By starting from the first element
d. By dividing the list length by two ✓
